

AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph starting on page 1, line 16, as follows:

Many web document authoring tools, such as ~~Front Page~~ FRONT PAGE from Microsoft Corporation and ~~Dreamweaver~~ DREAMWEAVER from Macromedia Corporation exist which provide templates which help the author achieve consistent feel across a set of web pages. However, this is of limited benefit where a set of pages are to be rendered across different devices as it does not take into account the capabilities of the devices unless a "minimum" specification template is used which can lead to low quality results on high capability devices.

Please amend the abstract as follows starting on page 24, line 5:

Authoring a document to be served for rendering on a plurality of classes of device comprises defining at least two choices of content which may be styled for a first content portion of the document, defining at least two choices of content which may be styled for a second content portion of the document, and labelling the choices of content to indicate approved combinations of content for the first content portion with content for the second content portion.
